

AMENDMENTS

1. (Four Times Amended) A method of using a recording device that records a pressure in a vacuum device adapted for fetal obstetrics, the vacuum device enabled to couple to a fetus, comprising:

electronically detecting a pressure in the vacuum device, the vacuum device enabled to couple to a fetus;

electronically recording the pressure in real time; and

storing a record of the pressure in the vacuum device.

7. (Four Times Amended) A method of using a recording device to record a pressure in a vacuum device adapted for fetal obstetrics, the vacuum device enabled to couple to a fetus, comprising:

placing the vacuum device on a fetus, the space between the fetus and the vacuum device having a pressure;

initiating a vacuum pressure in the suction device;

electronically detecting the vacuum pressure in the suction device; and

automatically recording the vacuum pressure in real time.

19. (Four Times Amended) A method of using an electronic recording device to record a pressure in a vacuum device adapted for fetal obstetrics, the vacuum device enabled to couple to a fetus, comprising:

coupling the recording device to the vacuum device, the vacuum device enabled to couple to a fetus; and

electronically recording the pressure in real time so that a record may be produced therefrom.

20. (previously amended)

21. (previously amended)

22. (new) A method of using a recording device that records a pressure in a vacuum device adapted for fetal obstetrics, the vacuum device enabled to couple to a fetus, comprising:

electronically detecting a pressure in the vacuum device, the vacuum device enabled to couple to a fetus;

electronically recording the pressure in the vacuum device in real time.
